

Australia's solar energy storage scale

Australia's energy market hit a turning point in 2025. As rooftop solar growth slowed, battery installations surged to record levels, reshaping how homes and the grid use electricity. This ...

This is the third edition of the Clean Energy Council's (CEC) half-yearly report monitoring the progress of the deployment of rooftop solar and behind-the-meter energy storage systems in Australia.

Australia's solar and energy storage sectors delivered strong performance during the third quarter of 2025, with grid-scale solar generation reaching 1,699MW average output while...

"The most pressing need in the next decade is for dispatchable batteries, pumped hydro or alternative storage to manage daily and seasonal variations in the output from fast-growing solar and wind ...

Q2 2025 saw 750 MW and 1,500 MWh of battery energy storage capacity commence operation in the NEM. This brought total battery capacity to 3.4 GW and 6 GWh.

Utility scale leads with a share of 50.12% of the total Australia energy storage market in 2025. Utility scale represents the largest end user segment in the Australia energy storage market, generating ...

A surge of new generation and storage capacity reached full output in Australia's main grid in the last quarter with nine projects totalling 1.8 GW of new capacity progressing through ...

Australia's rooftop solar story just reached another major milestone -- and it's one worth celebrating. By the end of 2025, Australia's total rooftop solar capacity climbed to 28.3 GW, spread ...

Australia's power market is changing quickly. In early 2025, over AUD 2.4 billion (USD 1.5 billion) went into large-scale battery energy storage systems (BESS). This was the second ...

Discover the latest solar news in Australia for 2026, including rooftop solar growth, battery storage trends, and major energy policy updates.
