

Researchers say event described as "major tipping point" for clean energy in era of destabilised politics Wind and solar overtook fossil fuels in the European Union's power generation ...

The EU is "rapidly" moving towards a clean energy future, but experts warn our "outdated" grid is holding us back. Wind and solar generated more EU electricity than fossil fuels for ...

Under the European Green Deal and the REPowerEU plan, solar power is a building block of the EU's transition to cleaner energy. Its accelerated deployment contributes to reducing the EU's ...

This milestone underscores the rapid advance of renewables in the region and cements solar power as the driving force of Europe's energy transition. This achievement not only reflects a ...

The power sector itself is seeing a true transition - solar and wind are not only replacing fossil power but also adding more on top. In 2038, wind and solar will generate 50% of power on the grid.

The EU solar sector continues its upward trajectory, with mid-2025 figures confirming robust growth. SolarPower Europe's latest analysis highlights record installations, policy momentum, ...

Wind and solar generated more EU electricity than fossil fuels for the first time in 2025, driven by a massive surge in solar power.

The latest report from Ember shows solar and wind outperformed fossil fuel generation in the EU in 2025 for the first time ever.

With the release of The European Electricity Review 2025, we're diving into the key findings that shape the future of energy in Europe. This report highlights record-breaking solar ...

The EU's electricity transition reached a new milestone in 2025 with wind and solar generating more power than fossil fuels.
