What size solar inverter do I Need?

Your inverter size should match your solar array's capacity, not your electricity bill. This means your inverter doesn't need to power your entire home--it just converts whatever your panels generate. Let's say you have a 6kW solar array (twenty 300-watt panels).

How do I choose a solar inverter?

Knowing your array size allows you to choose an inverter that can handle that production efficiently--without over- or under-investing in capacity. The second step is understanding your system's DC-to-AC ratio, one of the most important metrics when sizing a solar inverter.

What is a solar inverter sizing calculator?

A solar inverter sizing calculator is a tool used to determine the appropriate size of a solar inverter for your solar power system based on the total power consumption of connected appliances and the size of your solar panel array. It ensures the inverter can handle the peak loads efficiently.

Do I need a 5 kW inverter?

Most UK homes need at least a 5 kW inverter. While 3.68 kW is common, larger homes or those with batteries benefit from a 5 kW+ system. What is a solar inverter? A solar inverter converts electricity between "direct current" (DC) and "alternating current" (AC). Electricity produced by solar panels and electricity stored in batteries is DC.
