

Kathmandu Communications 5g Micro Base Station Construction Bidding Company

What is a 5G base station?

The 5G base station is the core device of the 5G network, providing wireless coverage and realizing wireless signal transmission between the wired communication network and the wireless terminal. The architecture and shape of the base station directly affect how the 5G network is deployed.

How does a base station affect a 5G network?

The architecture and shape of the base station directly affect how the 5G network is deployed. In the technical standards, the frequency band of 5G is much higher than that of 2G, 3G and 4G networks. At this stage, 5G networks mainly work in the 3000-5000MHz band. The higher the frequency, the greater t

Do micro base stations supplement signal blind spots?

This paper concludes that in the case of large-scale coverage of macro base stations, micro base stations supplement signal blind spots. Finally, the work gives forward suggestions for the construction and innovative development of relevant base stations globally. ITU Radio Regulations, Section IV.
