

On 2 February 2022, a power cable collapsed in Kinshasa, Democratic Republic of the Congo, killing 26 people. The accident occurred at a market in Matadi-Kibala on the outskirts of the capital of the DRC.

"The city of Kinshasa is supplied by an imposed quota of between 550 and 630 megawatts, but the need is beyond, or even triple, what we receive. This inadequacy is exacerbated by rapid demographic growth.

Based on these insights, a multifaceted policy approach--including grid modernization, prepaid billing systems, awareness campaigns, and regulatory enforcement--is recommended to mitigate electricity ...

Kinshasa, the capital of the Democratic Republic of Congo, has been the scene of major disruptions in the electricity sector following floods that impacted Snel high-voltage substations.

At least 26 people died electrocuted in DRC's capital, Kinshasa, after a high voltage power cable snapped and fell into a drainage ditch. The incident occurred in a popular food market and most...

According to the press release, Snel technicians have sounded the alarm and called for urgent intervention by the urban authorities to save this infrastructure, which was recently installed as part of the EASE project.

In Kisangani in 2017, a failure at the local hydroelectric dam resulted in 1.6 million people being without electricity for months. To mitigate these issues, many firms purchase their own power generators, ...

This study analyzes the determinants influencing electricity theft in Kinshasa, the Democratic Republic of Congo, using a logistic regression model applied to 385 observations, which includes...

In this article, we look at the continuing problem of burnt-out electrical cabins in Kinshasa, with a focus on a recent incident in Limete. We explore the reasons for these fires, such as non-compliant ...
