

Latest news on wind power generation period

How has the world's wind power sector changed in 2025?

The world's wind power sector recorded strong growth in the first half of 2025, with global installations rising by 64% compared to the same period of 2024. A total of 72,2 gigawatts (GW) of new capacity were added between January and June 2025, following 44,1 GW installed in the first half of the previous year.

What is wind power & why is it important?

Latest news on wind power, covering offshore and onshore developments, turbine technology, renewable energy projects, and sustainability initiatives worldwide. Wind power has emerged as a cornerstone of the global transition to renewable energy, with installed capacity reaching 1,110 GW by the end of 2024.

What's happening with wind power technology patents?

Windpower Monthly rounds up the latest wind power technology patents filed and published in the past week. US offshore wind developers are fighting back against the Trump administration's 90-day suspension of leases for the five projects under construction off the US.

How many GW of wind a year?

Over the twelve months from July 2024 to June 2025, the sector added 148 GW, compared with 125 GW during the preceding twelve-month period. By the end of June 2025, total installed wind power capacity reached 1,245 GW (1,25 terawatts), representing a 13,5% annual growth rate.
