

(SOC)

This study proposes an innovative hydrogen storage capacity optimization configuration method that considers multiple demand factors, addressing the issue that traditional methods for optimizing ...

Battery energy storage systems (BESS) play an important role in a microgrid for efficient exploration and exploitation of renewable energy sources such as solar and wind energy sources with various ...

A comparative analysis of diverse metaheuristic algorithms for microgrid optimization is provided in this paper, which emulates natural phenomena, such as evolutionary processes and ...

This study proposes an analytical framework for capacity optimization and a cost/carbon effectiveness assessment for building microgrid systems.

With the rapid development of renewable energy, independent microgrids integrating distributed energy sources such as wind and solar power have become a research

This article comprehensively reviews strategies for optimal microgrid planning, focusing on integrating renewable energy sources.

The optimal capacity design problem of the system is addressed using the Non-dominated Sorting Genetic Algorithm II (NSGA-II). A comparative analysis is conducted between the ...

Chapter 4 applies the EWOA to optimize microgrid operation and energy storage capacity configuration, validating its efficacy through comprehensive simulation examples.

Models and reporting scripts for microgrid capacity sizing optimization. This repository contains all code used to produce the results published in Mühlbauer et al. (2025) in Smart Energy (DOI:)

Microgrid Capacity Optimization Forum
