

National Photovoltaic and Wind Power Stations

Wind power is the nation's largest source of renewable energy, with more than 150 gigawatts of wind energy installed across 42 U.S. States and Puerto Rico. These projects generate ...

The U.S. Large-Scale Solar Photovoltaic Database provides the locations and array boundaries of U.S. photovoltaic facilities, with capacity of 1 megawatt or more.

The map combines three open energy datasets and allows visitors to explore global power plants and U.S. solar and wind energy projects using text search and map visualization tools. It serves as both a ...

The PV stations are sorted by capacity. The data in the table includes the state of location, capacity, annual output, land area occupied, developer, and year of grid connection.

Few studies have optimized global deployment of photovoltaic and wind power. Here we present a strategy involving construction of 22,821 photovoltaic, onshore-wind, and offshore-wind...

Other major electricity generation technologies include gas turbines, hydro (water) turbines, wind turbines, and solar photovoltaics. The U.S. Energy Information Administration ...

Renewable energy with photovoltaic and wind power as the main body has entered a new development stage. Its development trend and relevant policy guidance have also brought new ...

In this paper, an open dataset consisting of data collected from on-site renewable energy stations, including six wind farms and eight solar stations in China, is provided.

NLR's solar energy research leverages our expertise--from materials to systems to commercialization--to continually improve the affordability, performance, and reliability of this ...

National Laboratory of the Rockies (NLR) bridges research with real-world applications to advance energy technologies that lower costs, boost the economy, strengthen security, and ensure ...
