

New wind turbines without blades

An energy startup company called Vortex Bladeless has come up with a wind turbine design that doesn't incorporate blades and it's like nothing we've ever seen before. The revolutionary ...

France has taken a bold step into the future with bladeless wind turbines, harnessing wind energy in a whisper instead of a roar. This innovation offers a potential answer to the aesthetic, ...

Bladeless wind turbines are a cost-effective sustainable energy option. See their potential and how they compare to traditional options here.

University of Glasgow researchers are working to unlock the potential of bladeless wind power. For the first time, computer simulations of bladeless wind turbines (BWTs) have pinpointed...

? Researchers at the University of Glasgow have developed a groundbreaking bladeless wind turbine technology. ? The new design promises quieter and more efficient power generation with ...

On a wind plateau in Normandy, engineers have unveiled one of the most elegant energy systems ever: a wind turbine without blades. No spinning blades. No gears. No noise. Just a slender ...

A new, bladeless wind turbine is changing the game in clean energy. Silent, bird-safe, and compact, this innovative design is poised to revolutionize how we harness wind power.

New bladeless wind turbine uses vibration instead of blades, offering quieter, safer, and greener energy for homes and cities.

Bladeless turbines, by contrast, could fit seamlessly into urban environments. Their compact, upright form makes them less obtrusive. They are quieter, simpler, and have fewer moving ...

Startup technology Vortex wind power for on-site generation, the low-cost wind turbine which is not a turbine!
