This article explores how PNG can increase electrification, modernise its grid, and embrace renewable energy, all while navigating the complexities of geography, governance, and ...

A \$6.7 million New Zealand aid electrification project in a tribal violence hot spot of Papua New Guinea has been halted due to security concerns.

The Government of Papua New Guinea also aims to increase electricity access to 70% of the population by 2030, a goal which will require connections of 100,000 households per year.

The new project supports PNG's goal of achieving 70 percent electrification by 2030, focusing on grid expansion, densification, and innovative off-grid solutions.

In a new paper, we explore why PNG's grid has struggled to expand, what role decentralised solar could play and how other countries have overcome similar challenges.
