

Progress, while still deeply uneven, is now measurable and irrefutable. Ten years post-Paris, the direction of travel is clear: the clean-energy transition is more advanced than analysts ...

Ten years after the landmark Paris Agreement to pursue net-zero emissions by 2050, the world faces a slowing transition to clean energy despite record-breaking renewable capacity ...

FAQs [Subscribe](#) [BACK TO NEWS](#) Ten years after the Paris Agreement, only six out of 45 sectors are moving in the right direction of the energy transition [October 26, 2025](#) [Subscribe for updates](#) [Get the ...](#)

The Paris Agreement set the global goal of limiting warming to well below 2 °C and pursuing efforts to limit it to 1.5 °C. The IEA Net Zero Emissions by 2050 Scenario (NZE Scenario) translates the 1.5 °C ...

On the 2 April 2025, Dr Brian Motherway of the IEA opened the 2025 Rethink Energy series with an address on global clean energy transitions a decade after the Paris Agreement.

The 2015 Paris Agreement established a global framework to limit warming to 1.5-2°C, setting the foundation for the global energy transition. More than 140 countries, representing 90% of ...

In the decade since the landmark COP21 Paris agreement aimed to limit global warming, both a lot and a little has changed when it comes to the energy sector makeup and the trajectory of...

Delve into the specifics of energy transition under the Paris Agreement, including the strategies and technologies driving change.

In this article, we compare climate targets against emission levels forecast in DNV's Energy Transition Outlook 2025 (ETO 2025). We project Europe to be the first region to reach net ...

Ten years on from the Paris Agreement, meeting the targets outlined in the UN climate treaty remains challenging. Digital intelligence will be key to decarbonization, as well as building ...
