For tailored guidance, consult a solar expert who understands your unique needs. Horizontal solar panels make the most energy and cost less to set up and fix. Vertical solar panels save space and are good in snowy or cold places because they lose snow fast. Bifacial panels take in sunlight from both sides and can make up to 30% more energy.

How do vertical solar panels work?

Vertical solar panels stand up straight and usually face east and west. This is called vertical installation or vertical mounting. You might see vertical solar panels on the sides of buildings, fences, or as noise walls by roads. Vertical mounting is good for places with small roofs or where there is a lot of snow and dust.
