

What is a solar panel size?

When discussing solar panels, the term "size" can be confusing because it refers to electrical capacity rather than physical dimensions. Solar panel size is measured in watts (W) and indicates how much electricity the panel can produce under standard test conditions.

What size solar panel do I need?

The standard residential solar photovoltaic panel size you'll see most often is based on a 60-cell configuration, typically measuring about 67 inches long by 40 inches wide. This size offers the best balance between power output, handling ease, and fitting standard roof dimensions.

What is the average solar panel size in the UK?

For reference, as of February 2025, the average residential solar PV system in the UK is 4.6 kW<sub>p</sub>, according to the Microgeneration Certificate Scheme (MCS). How have solar panel sizes changed over time? In the case of power rating, solar panel sizes have increased significantly over the past few decades.

How do I choose the right solar panel size?

The solar panel size directly affects how much power your system can produce, how many panels you need, and whether your available roof space can support the installation. Choosing the proper system is not only about the solar panel dimensions. You should also consider wattage, number of cells, layout possibilities, and energy consumption.
