

Prague Airport uses DC power storage containers

Lithium batteries, common accumulators used for charging personal electronic devices on board (e.g. mobile phones, digital cameras) and power banks are only permitted in hand baggage.

Please transport power banks, laptops, tablets, mobile phones, e-cigarettes and other lithium-battery-powered devices in cabin baggage only. If a lithium battery gets damaged or short-circuits, it may ignite.

Menzies Aviation has installed almost 900 solar panels at its Prague Airport cargo facility, cutting CO2 emissions by almost 140 tonnes a year.

By acting as flexible, fast-response buffers between electricity generation and consumption, batteries help manage a complex and dynamic power grid more effectively. One of the ...

Unlike older X-ray machines that only produce flat, two-dimensional images, the new system allows airport staff to inspect luggage without asking travelers to remove laptops, tablets, or ...

Prague Airport has so far purchased six CT scanners and plans to add two more next year. At some security stations in Terminal 2 where older scanners remain in use, travelers will still need to ...

For batteries with higher performance, or for information on carrying other power sources (e.g., accumulators with free electrolytes), please contact the airline.

* All containers with gels and liquids must be placed in a re-sealable transparent plastic bag with a maximum content of 1 litre and removed from the the cabin baggage prior to the security check.

Passengers departing from Terminal 2 will be able to carry one container of liquid over 100 millilitres and up to a volume of 2 litres per person, in addition to one standard one-litre bag with containers up to ...

The main components include: - the construction of electric vehicle charging infrastructure - the installation of electric ground power units for aircraft - the acquisition of electric buses and other ...
