

# Regulation up and down ercot

How do ERCOT's Ancillary Services work? Learn about the differences between Regulation (Up and Down), Responsive Reserve, Non-Spinning Reserve, and ECRS.

ERCOT is the single Reliability Coordinator (RC) for the ERCOT Interconnection and is responsible for reliability coordination and associated reporting for the region. ERCOT's functions as ...

Regulation service is an ancillary service that provides capacity that can respond to signals from ERCOT within seconds to respond to changes in system frequency. There are two different types of ...

This dashboard provides sparklines (small line charts) of Reg-Up, Reg-Down, Responsive Reserve Service (RRS), ERCOT Contingency Reserve Service (ECRS), and Non-Spinning Responsive ...

This calculation is performed in December for each hour of each month, in increasing (Reg-Up) and decreasing (Reg-Down) direction, to ...

This calculation is performed in December for each hour of each month, in increasing (Reg-Up) and decreasing (Reg-Down) direction, to determine the quantities that will be procured for ...

This paper presents a statistical analysis of the impact of different NPRR changes over ERCOT procured Regulation-Up and Regulation-Down operational reserves. The significance of them was ...

The table below summarizes ERCOT's NERC balancing requirements and how ERCOT uses SCED, Regulation, RRS, and ECRS (with backup from Non-Spin) to meet these requirements.

ERCOT uses Regulation Service Up and Down to balance the grid when supply and demand fluctuate due to weather, generation outages, or transmission outages. They use Responsive Reserves and ...

The ERCOT uses four types of ancillary services: Regulation up, Regulation down, Responsive Reserves (RRS) and Non-Spinning Reserves. These types are chiefly distinguished by response ...

o Regulation Up: Cost paid to operators who can provide frequency regulation service (maintain 60 Hz) so that generation output can be increased to the grid. o Regulation Down: Cost paid to operators ...
