

Solar Power Development Roadmap

This Roadmap provides recommendations for mobilizing a massive and more equitable scale-up of investment in solar energy by 2030.

We accelerate the advancement and deployment of solar technology in support of an equitable transition to a decarbonized economy no later than 2050, starting with a decarbonized power sector by 2035.

The Local Government Solar Project Portal is intended to provide solar project development tools and resources to aid local governments through each step of solar project development.

This roadmap provides the basis for greater international collaboration and identifies a set of effective technology, economic and policy goals and milestones that will allow solar PV to deliver on its ...

Master solar energy with our comprehensive roadmap. Learn about photovoltaic systems, solar thermal, and concentrated solar power Free resources and step-by-step guidance.

Beginning June 2025, compensation for new wind and solar energy will switch from fixed to market -driven pricing. o The proportion of wind and solar traded in wholesale markets will jump ...

Communities can generate a customized Solar Roadmap to benchmark their initial status, set clean energy and economic development goals, and track progress toward reaching their goals.

Disclaimer Acknowledgements Key actions in the next ten years PV status today Technology development: Strategic goals and milestones Solar energy active conversion technologies The purpose of the roadmap Emerging economies: rapidly growing PV markets Technology development: Strategic goals and milestones Thin films II-VI semiconductor thin films Emerging technologies Novel PV concepts Concentrator technologies (CPV) Policy frameworks: Roadmap actions and milestones Set predictable financial incentive schemes and regulatory frameworks Establish regulatory frameworks that facilitate large-scale PV grid integration Foster new financing and business models Create a skilled PV workforce Increase public R& D funding and ensure sustained, long-term RD& D funding Develop and implement smart grids and develop and apply enhanced energy storage technologies International collaboration Expand international RD& D collaboration Develop mechanisms to support best practices in developing economies Assess and express the value of PV energy in economic development This report is the result of a collaborative effort between the international energy agency (iea), its member countries and various consultants and experts worldwide. Users of this report shall make their own independent business decisions at their own risk and, in particular, without undue reliance on this report. Nothing in this report shall cons...
