

# Solar power generation exceeds

Renewable energy has generated more electricity than coal for the first time in history, signaling a major global shift toward clean energy.

Renewable energy overtook coal as the world's leading source of electricity in the first half of this year - a historic first, according to new data from the global energy think tank Ember.

The world's wind and solar farms have generated more electricity than coal plants for the first time this year, marking a turning point for the global power system, according to research.

For the first time, renewable energy has overtaken coal as the primary source of electricity around the world, a new report says, indicating a shift in the global reliance on environmentally...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal, according to a new ...

The world generated almost a third more solar energy in the first half of the year compared with the equivalent timeframe in 2024, meeting over four-fifths of the global increase in ...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal, ...

Global electricity generation from solar and wind has surpassed coal for the first time, signaling a fundamental shift in the world's power mix.

Global renewable power generation surpassed coal generation for the first time on record in the first half of 2025, according to a new analysis from Ember, announced on Tuesday.

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...
