

Solar power generation in Germany

Wind power took first place as the strongest net electricity producer, followed by photovoltaics, which increased its production by 21 percent in 2025 and overtook lignite for the first time.

Germany produced 18% of its electricity through solar power in 2025, up from 14% in 2024, a significant leap that meant solar overtook both coal and methane gas in the country's ...

Germany's current largest solar installation, located in Saxony, went into operation in spring 2024 with a capacity of 162 megawatts (MW). At the end of 2024, installed solar capacity in ...

Discover all statistics and data on Solar photovoltaics in Germany now on statista !

Far from being a sun-drenched country, Germany boasts one of the world's highest solar power outputs. The country triggered the large-scale launch of the technology with guaranteed feed-in tariffs in the ...

Solar farms are set for a record stretch of power sector dominance in Germany after becoming the single largest generation source in the country at the earliest point of the year ever.

Since 2004 solar power in Germany has been growing considerably due to the country's feed-in tariffs for renewable energy, which were introduced by the German Renewable Energy Sources Act, and ...

Germany made a notable shift toward renewable energy sources last year, according to a report from the Federal Network Agency released on Friday. Renewable energy accounted for 59% ...
