

# Solar power generation project policy

This page describes the patchwork of federal, state, and local policies and regulations pertaining to renewable energy systems that impact project development.

At the federal level, there are several key policies, programs, and regulations that impact the development of solar PV and other renewable energy projects, influencing project procurement ...

SEIA is engaged with policymakers at the regulatory and legislative levels in Washington, D.C. and across the country to establish supportive policy frameworks that allow solar to compete in the ...

This statute provides the framework for the development of solar energy and wind energy projects on federal lands managed by the Bureau of Land Management (BLM).

With an ambitious target of generating 40% of the nation's electricity from solar sources by 2035, the law establishes unprecedented tax credits for solar installations, streamlines permitting ...

"Renewable energy project" means any solar-powered electric power generation project built for individual, farm, corporate, or non-profit use and not connected to the power grid for electrical ...

In our STEO forecast, utility-scale solar is the fastest-growing source of electricity generation in the United States, increasing from 290 BkWh in 2025 to 424 BkWh by 2027. Almost 70 ...

New report and interactive map provide a detailed look at the diversity of renewable energy siting and permitting regulations and processes across the United States, profiling all 50 ...

Solar technologies are a critical component of this expanded deployment, and they have experienced unprecedented growth in recent years.

The regulatory landscape governing solar power generation is an intricate tapestry of local, state, and federal policies designed to facilitate the growth of this vital renewable energy sector.
