Chapter seven describes the technical challenges that arise when the amount of variable renewable energy in the grid increases, along with solutions that are provided by energy storage systems.

For some storage technologies, there is a certain amount of energy that must be constantly kept in the storage unit to ensure low degradation or to maintain specific conditions (e.g. pressure, temperature).

Available in both 100kWh and 215kWh capacities, this modular system integrates power modules, batteries, cooling, fire protection, and environment monitoring in a compact outdoor cabinet.
