

What to do if the battery cabinet does not have batteries

How do you store a battery?

Store batteries upright: Storing batteries upright helps: Prevent leaks of the flammable electrolyte in case they are not sealed properly. Ensure batteries equipped with venting systems work properly avoiding internal pressure buildup. Avoid physical damage from falls or tipping over.

Should a battery be fully charged during long-term storage?

During long-term storage, batteries should never be continuously charging, nor should they be fully charged or fully discharged. The rationale for each is as follows: Continuously charging: Battery failure is most likely to occur during charging. Continuously charging over long periods of time greatly increases the risk.

How do you unlock a safe with a battery holder?

If you have one, then your battery holder is probably inside your safe. Insert the key into the keyhole and turn it to unlock the safe. Remember to keep your override key somewhere safe and never lock it inside your safe. If you lose it, call a professional locksmith service to gain access to your lockbox.

Do batteries need ventilation?

Ventilation: Effective ventilation in the storage area is an integral component of all safe battery storage to help keep the batteries cool and avoid degradation. However, if the storage location is enclosed and/or the batteries will be charging while stored, proper ventilation becomes a necessity for two important reasons:
